

Abstract of the Disclosure

The present invention consists of improvements in silicone emulsion blends that provide a unique, useful and reliable composition and means for protecting and aesthetically enhancing the surface of rubber and other natural and synthetic polymers, leather, and wood. Specifically, the present invention consists of an emulsion blend comprising (1) an aqueous emulsion of polydimethylsiloxane and (2) an aqueous emulsion of organopolysiloxane which upon drying forms a solid elastomeric film of siloxane; and a polyol.
